SANMOTION R SERVO AMPLIFIER with integrated CANopen interface

In response to the constantly growing demand for the networked drives, the Japanese supplier SANYO DENKI newly developed the servo amplifiers with CANopen interface to meet the European requirements.

The SANMOTION R Series are available with 2 power input voltage, single phase 230 VAC for smaller motors, and three phase 400 VAC for the bigger motor sizes.

The 230 VAC single phase amplifier types are Available either with CANopen interface or pulse/analogue interfaces, while the 400 VAC three phase amplifier types have both CANopen and the conventional interfaces equipped. The standard absolute encoder is an additional feature, which gives the SANMOTION R Series excellent value for money.

The SANMOTION R Series:

- single phase 230 VAC input designed for 15A, 30A, 50A peak current at servo motor performance from 30W up to 1,5kW
- three phase 400 VAC input designed for 25A, 50A, 100A peak current at servo motor performance from 0,5kW up to 7kW
