News: Oil proof and splash proof fans

SANYO DENKI offers its splash proof fan „San Ace W“ WP Type in the additional size of 92x92x25 mm since 2007.

A new special frame reduces the total weight by 40% to approx. 120g.

This IP55 fan is currently available at two different speeds and reaches a life expectancy of 40 000 h at 60 °C.

The air flow is specified at 1,24 m³/min and 0,90m³/min respectively. This types of fans are therefore suitable for applications in harsh environments.

Furthermore SANYO DENKI enlarged its series of oil proof fans “San Ace WF” to the size of 60x60x15 mm. The inductive and electric parts are processed with a special oil resistant material and protect the fan from a high concentration of oil mist. This fan reaches an air flow of 0,52 m³/min and a static pressure of 95 Pa with a life expectancy of 40 000 h at 60 °C.

Typical application areas for both fan types are industrial machines.
